*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be the best ebook for possibly.

LetP = the power acting at the extremity of the lever, / = the power acting at the surface of the cylinder, W= the weight which is kept in equi- --E- librio by P, then, by Art. 4, p: W:: d: circumference AFG, J: p:: CA CB:: circumf. We () AFG represents a section of the cylinder upon which the screw is cut. (b) From this proportion it appears that the relation of P: W depends entirely upon the distance between the spirals and the circumference which the power describes, whatever he the thickness of the cylinder upon which the screw is cut; and since P (IVd Wd, , . n d. =----1 oc--, when W is given, Poc; i.e. the power ipa/ a a necessary to sustain a given weight varies directly as the distance between the spirals, and inversely as the length of the lever. 6. We have thus estimated the magnitude of the weight which might be sustained by a given power applied to the elevation of the screw; but this machine is more often used for the purpose of creating a pressure, than raising a weight; and it is evident, that...
