

Exercises in practical physics for schools of science Volume 2

By Sir Richard Gregory

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: . . . are thus found to vary directly as the square roots of the stretching loads. The student should carefully consider and satisfy himself that this deduction is correct. b) Place a wire on the monochord and stretch it by a known weight. Find the length required to give a note in unison with the tuning fork of which the actual frequency is known. Weigh a measured length of the wire, and find the mass (m) of 1 cm. Express the stretching weight in dynes (7), and hence test the following relationship. 1 1 IT Number of vibrations per second --7 V--2 m $\times A$ dyne is the force which, acting upon a gram for one second, generates a velocity of one centimetre per second. The weight of 1 gram is g dynes, and of m grams is mg dynes. The value of g may be taken as 981 cm. per second. (See Part...

Reviews

This ebook is definitely not simple to begin on reading but really enjoyable to read through. This really is for all who statte that there had not been a worth reading. You may like how the author publish this ebook.

-- Demetrius Buckridge

This book may be really worth a read through, and a lot better than other. It is really basic but excitement inside the 50 % in the pdf. I realized this pdf from my dad and i encouraged this publication to learn.

-- Curtis Bartell
